### ABOUT THE EXHIBITION

*"The visual culture my generation inherited is nothing but flotsam and jetsam—the product of an exponential deconstruction. A deconstruction that took a mortar and pestle to the avant-garde and left art and design in splintered fragments—fragments that circulate within the commercial and non-commercial realms."* –Yuri Masnyj

Modular surveys a new generation of Los Angeles artists immersed in a radically fragmented visual culture that threatens to simultaneously spin off into space or collapse in on itself like a dying sun. Each work is a set in a complex structure: LA being the constant factor relating a physical effect to the force producing it. Visual and formal links run through the work on a generally subconscious or formal level—the artists do not know each other so the work remains socially separated but still forms a visual whole.

The exhibition is a construction kit of sorts, describing how today's LA artists work through the same social, visual, architectural and natural landscape as separated units producing eerily interrelated work. The formal affinities between these artists, are reminiscent of IKEA's interlocking designs: The simpler the construction methods the better; the cheaper the materials the better, but it still looks flashy enough to have in your living room. Within the composite fragments nothing quite looks out of place in the store the home or the museum. The democratically priced IKEA is desirable, hyper modern and disposable— A perfect example of Masnyj's stylistic flotsam of the 'exponential deconstruction' of the avant-garde. The Modular style exploits geometry without being about geometry, blithely grinding together architecture, furniture and biological structures to create a deceptively complex art. It evokes fashionable styles and historical methods of construction, but relies on materials such as mdf, pvc, and aluminum to produce apparently throw away objects.
